PREPARING FOR YOUR PROCEDURE OR MRI SCAN

If you are going to undergo a surgical procedure or have an MRI scan, follow these steps:

1. Tell the physician who prescribed your MRI scan or is performing your surgery that you have an implanted Proclaim™ neurostimulation system.
2. Contact your pain specialist to:
   - Determine whether you can safely undergo the type of MRI scan prescribed (if applicable).
   - Discuss your upcoming procedure or scan and the possible effects it may have on your implanted device.
3. Schedule your procedure or scan. When scheduling:
   - Provide the model numbers and locations of your implanted neurostimulation system parts and your pain specialist’s contact information. This information is located on your Abbott Patient ID Card.
   - For MRI scans, inform the radiologist of all implanted medical devices (including abandoned devices).
4. Fully charge your patient controller before the procedure.

BRING THE FOLLOWING ITEMS TO YOUR MRI APPOINTMENT:

- Abbott Patient ID Card
- Patient Controller
- Patient Eligibility Form for MRI Scans (recommended, but not required)
INTRODUCTION TO SURGERY MODE AND MRI MODE

Implantable neurostimulation systems are active electronic devices designed to help manage your condition. These devices can be receptive to external factors sometimes seen during surgical procedures or MRI scans.

To help reduce the possibility of negative device interaction during these procedures,* your system has two different features that can be activated:

- Surgery Mode — for use during surgical procedures
- MRI Mode — for use during MRI scans

These modes can be activated directly from your Patient Controller.

USING THIS GUIDE

This guide is intended to help you activate and deactivate these modes. If you feel uncomfortable completing the steps, contact your Abbott representative before your procedure or scan. Contact your physician before your procedure to learn about any risks. This guide should be used in addition to the Instructions for Use for your device.

*These features do not completely eliminate the possibility of the neurostimulator being affected during surgery or MRI scans.

PLACING YOUR SYSTEM INTO SURGERY MODE

Place your device into Surgery Mode before your procedure. Activating Surgery Mode turns off your stimulation.

**To turn on Surgery Mode**

1. From the Therapy screen, tap the information icon. Make sure your application version is higher than version 3.3.
2. From the Therapy screen, tap Mode to display the Mode screen.
3. Tap Surgery Mode to view the Surgery Mode screen.
4. Tap the Surgery Mode toggle button.

**To turn off Surgery Mode**

1. Launch the patient controller app and connect with your generator. The “Generator is in Surgery Mode” message appears.
2. Tap Exit Surgery Mode to turn off Surgery Mode.
3. The Therapy screen appears, showing that stimulation therapy is off.
4. Tap Therapy is OFF to start stimulation.

PLACING YOUR SYSTEM INTO MRI MODE

Place your device into MRI Mode up to 24 hours before your MRI scan. Activating MRI Mode turns off your stimulation.

**To turn on MRI Mode**

1. From the Therapy screen, tap Mode to display the Mode screen.
2. Tap MRI Mode to view the MRI Mode screen.
3. Tap the MRI Mode toggle button.
4. When the “Set Generator to MRI Mode?” message appears, tap CONTINUE. Stimulation stops, and the patient controller app checks the system for any issues.
5. If the checks are successful, the “Proceed with MRI” message appears and MRI Mode is turned on. Tap OK.

**To turn off MRI Mode**

1. Launch the patient controller app and connect with your generator. The “Generator is in MRI Mode” message appears.
2. Tap Exit MRI Mode to turn off MRI Mode.
3. The Therapy screen appears, showing that stimulation therapy is off.
4. Tap Therapy is OFF to start stimulation.

IMPORTANT ITEMS TO REMEMBER

Surgery Mode or MRI Mode should be turned on before you enter the room where your procedure or MRI scan will be performed. Otherwise, the potential for uncomfortable, unintended stimulation or damage to the neurostimulator is increased. Refer to your user guide for more information.

**FOR SURGERY MODE**

Turning off Surgery Mode before the completion of your procedure may cause unintended effects like unintended stimulation or damage to your neurostimulation system. Refer to your user guide for more information.

**FOR MRI MODE**

Do not bring your controller into the room where your MRI will be performed. Your neurostimulator may be MR Conditional, but your controller is not. Exposing it to the MRI magnet can present a projectile hazard.
